"Microtrade" is international trade on a small scale, based primarily on manually produced products using small amounts of capital and low levels of technology available at a local level in lesser developed countries. This book explores the theory, application, and legal framework for microtrade. The book then goes on to look at issues including the structure and financing of microtrade, e-commerce, government procurement, and the fair trade movement's possible relationship with microtrade. The final part of the book considers empirical case studies of microtrade with agricultural products. The book shows how microtrade, if effectively administered on a global scale, can do much to end extreme poverty.
