Why? 3. What is osteomyelitis caused by? 4. Where does the infection localize? 1. The marked increase in patients entering emergency rooms in hospitals has resulted in a need for increasing facilities in almost every hospital. 2. The patient was examined for an injury to his leg which had been broken in an automobile accident. 3. Four weeks later the deep abrasions of the thigh were skin grafted. 4. If a bone in the forearm is broken the splint must reach above the elbow and extend below the wrist. Â Cardiac cells die, heart contractions may cease, and circulation may come to a standstill. If a coronary artery is completely plugged, the condition is called a coronary occlusion or heart attack.
