xiii Authors
xxv Conference Committee

Part One

JWST I

10698 03 Performance of the center of curvature optical assembly during cryogenic testing of the James Webb Space Telescope [10698-2]
10698 04 James Webb Space Telescope optical performance predictions post cryogenic vacuum tests [10698-3]

JWST II

10698 06 Optomechanical modeling of the optical telescope element and integrated science instrument module (OTIS) cryo-vacuum test for the James Webb Space Telescope (JWST) [10698-5]
10698 07 JWST's near infrared spectrograph status and first OTIS test results [10698-6]
10698 08 JWST mirror and actuator performance at cryo-vacuum [10698-7]

MISSIONS

10698 OC SPICA mid-infrared instrument (SMI): conceptual design and feasibility studies [10698-11]
10698 0E Stray light analysis and testing of the SoloHI (solar orbiter heliospheric imager) and WISPR (wide field imager for solar probe) heliospheric imagers [10698-13]
10698 0F A submm-wave comet explorer for water isotopic composition measurements [10698-14]
PROBE STUDY OVERVIEWS

10698 0H  The ARIEL space mission [10698-16]

10698 0J  The NASA probe-class mission concept: CETUS [10698-18]

10698 0K  CHEOPS: the ESA mission for exo-planets characterization [10698-19]

10698 0L  The Galaxy Evolution Probe: a concept for a mid and far-infrared space observatory [10698-20]

DECADAL STUDY OVERVIEWS: JOINT SESSION WITH CONFERENCES 10698 AND 10699

10698 0O  The large UV/optical/infrared surveyor (LUVOIR): decadal mission study update [10698-23]

HABEX I

10698 0S  Technology maturity for the habitable-zone exoplanet imaging observatory (HabEx) concept [10698-27]

10698 0T  HabEx space telescope exoplanet instruments [10698-28]

HABEX II

10698 0U  HabEx: A high-precision pointing architecture using microthrusters and a fine steering mirror [10698-29]

10698 0W  Overview and performance prediction of the baseline 4-meter telescope concept design for the habitable-zone exoplanet observatory [10698-31]

10698 0X  HabEx Lite: a starshade-only habitable exoplanet imager alternative [10698-32]

LUVOIR I

10698 0Y  Picometer level stability of a mounted mirror assembly [10698-33]

LUVOIR II

10698 13  Optical budgeting for LUVOIR [10698-38]

Neural network control of the high-contrast imaging system

Impact of ionizing radiations on ZERODUR

SMALL SATS I

CubeSats for infrared astronomy

SPHEREx: an all-sky NIR spectral survey

The HOSTS survey for exo-zodiacal dust: preliminary results and future prospects

Design of the Didymos Reconnaissance and Asteroid Camera for OpNav (DRACO) on the double asteroid redirection test (DART)

SMALL SATS II

Two-stage attitude control for direct imaging of exoplanets with a CubeSat telescope

PSF photometry for BRITE nano-satellite mission

Short life and abrupt death of PicSat, a small 3U CubeSat dreaming of exoplanet detection

Development of near-infrared imaging spectrometer (NISS) onboard NEXTSat-1

IN: SPACE ASSEMBLY

Breaking the cost curve: applying lessons learned from the James Webb space telescope development

In-space assembly application and technology for NASA’s future science observatory and platform missions
Part Two

EUCLID

10698 2B VIS: the visible imager for Euclid [10698-78]

10698 2B The EUCLID NISP grisms flight models performance [10698-81]

WFIRST I

10698 2F Multi-star wavefront control for the wide-field infrared survey telescope [10698-85]

10698 2G Wide-field infrared survey telescope (WFIRST): composite structure verification for operational temperatures [10698-86]

WFIRST II

10698 2K WFIRST coronagraph flight performance modeling [10698-90]

WFIRST III

10698 2M High accuracy coronagraph flight WFC model for WFIRST-CGI raw contrast sensitivity analysis [10698-92]

10698 2O WFIRST low order wavefront sensing and control dynamic testbed performance under the flight like photon flux [10698-94]

10698 2Q Superpolished OAPs for WFIRST CGI [10698-96]

POSTERS: CORONAGRAPH

10698 2T Straylight analysis for the externally occulted Lyot solar coronagraph ASPIICS [10698-99]

10698 2U Accelerated modeling of near and far-field diffraction for coronagraphic optical systems [10698-100]

10698 2W Apodized pupil Lyot coronagraphs designs for future segmented space telescopes [10698-102]

10698 2Y Development of ASPIICS: a coronagraph based on Proba-3 formation flying mission [10698-104]
POSTERS: CUBESATS

10698 32  SmallSat interferometry for THz astrophysics [10698-105]

POSTERS: EUCLID

10698 34  The application software of the instrument control unit of Euclid-NISP: ready for qualification tests [10698-107]
10698 35  EUCLID: design, analysis, fabrication, and test of a 1.3 m collimator for the on-ground characterization of the EUCLID payload module [10698-108]
10698 37  The Euclid SIM VIS focal plane assembly metrology: description of the method to measure the CCDs position and the flatness of the full camera [10698-110]
10698 3A  Snowballs in Euclid and WFIRST detectors [10698-113]

POSTERS: EXOPLANETS

10698 3B  A comparison between the opto-thermo-mechanical model and lab measurements for CHEOPS [10698-115]

POSTERS: HABEX

10698 3E  HabEx space telescope optical system overview: general astrophysics instruments [10698-117]
10698 3H  HabEx polarization ray trace and aberration analysis [10698-120]
10698 3I  Mirror design study for a segmented HabEx system [10698-121]

POSTERS: JWST

10698 3L  Spectrum extraction from detector plane images for the medium-resolution spectrometer of the mid-Infrared Instrument on-board the James Webb Space Telescope [10698-124]
10698 3M  JWST optical telescope element center of curvature test [10698-125]
10698 3O  Fringing solution for the mid-infrared instrument on-board the James Webb Space Telescope [10698-127]
10698 3P  Wavefront sensing and controls demo during the cryo-vac testing of JWST [10698-128]
10698 3Q Operability assessment concept for the JWST/NIRSpec micro-shutter array (MSA) [10698-129]
10698 3R JWST cryo fine guidance closed loop test results [10698-130]
10698 3S Characterization and calibration of the James Webb space telescope mirror actuators fine stage motion [10698-131]
10698 3U Time series observations with the mid-infrared instrument (MIRI) on JWST [10698-133]

POSTERS: LUVOIR

10698 3Y Telescope line-of-sight slew control and agility with non-contact vibration isolation for the large ultraviolet/optical/infrared (LUVOIR) surveyor concept [10698-137]
10698 40 LUVOIR primary mirror segment alignment control with joint laser metrology and segment edge sensing [10698-139]
10698 41 Picometer differential wavefront metrology by nonlinear Zernike wavefront sensing for LUVOIR [10698-140]
10698 42 Preliminary jitter stability results for the large UV/optical/infrared (LUVOIR) surveyor concept using a non-contact vibration isolation and precision pointing system [10698-141]

POSTERS: ORIGINS

10698 45 Stray light overview for the Origins Space telescope [10698-201]

POSTERS: MISSIONS

10698 47 Current design of the electrical architecture for the payload module of LiteBIRD [10698-144]
10698 48 Development of optical system for the NISS onboard NEXTSat-1 [10698-145]
10698 49 Development of data storage system and GSE for cosmic infrared background experiment 2 (CIBER-2) [10698-146]
10698 4A The telescope optical unit prototype AIV in the framework of the PLATO ESA mission [10698-147]
10698 4C A Mercury surface radiometric model for SIMBIO-SYS instrument suite on board of BepiColombo mission [10698-149]
Europa imaging system wide angle camera: the effect of gamma radiation on the refractive index and transmission of radiation resistant glasses [10698-150]

PICO: the probe of inflation and cosmic origins [10698-152]

Part Three

The design of the instrument control unit and its role within the data processing system of the ESA PLATO Mission [10698-153]

Thermal architecture of the ESA ARIEL payload [10698-154]

Integration and instrument characterization of the cosmic infrared background experiment 2 (CIBER-2) [10698-156]

The optical design and physical optics analysis of a cross-Dragonian telescope for LiteBIRD [10698-157]

Optimal starshade observation scheduling [10698-159]

The High Resolution Telescope (HRT) of the Polarimetric and Helioseismic Imager (PHI) onboard Solar Orbiter [10698-160]

Design of the instrument and telescope control units integrated subsystem of the ESA-ARIEL payload [10698-162]

Performance overview of the near infrared detectors in Korean space missions NISS and LIRS [10698-163]

Development of optomechanical structure for the NISS onboard NEXTSat-1 [10698-164]

Fast linearized coronagraph optimizer (FALCO) II: optical model validation and time savings over other methods [10698-165]

Modeling the JANUS stray-light behavior [10698-168]

PLATO: the ESA mission for exo-planets discovery [10698-170]

Characterisation of the analogue read-out chain for the CCDs onboard the mesospheric airglow/aerosol tomography and spectroscopy (MATS) [10698-171]

The pre-launch distortion definition of SIMBIO-SYS/STC stereo camera by rational function models [10698-173]
The far-infrared space interferometer study IRASSI: motivation, principle design, and technical aspects [10698-175]

From a demonstration model to the flight model: AIV procedures and results for CHEOPS telescope [10698-177]

POSTERS: OBSERVING TOOLS

Correcting distortions in the infrared array camera during the cryogenic mission of the Spitzer Space Telescope [10698-186]

The role of narrow-angle forward surface scatter and particulate scatter in exoplanet exploration [10698-188]

Scheduling and target selection optimization for exoplanet imaging spacecraft [10698-191]

Direct measurement of the intra-pixel response function of the Kepler Space Telescope's CCDs [10698-193]

Image processing methods for exoplanets detection and characterization in starshade observations [10698-194]

The contrast performance of the NIRSpec micro shutters and its impact on NIRSpec integral field observations [10698-197]

Compressive sampling for multispectral imaging in the vis-NIR-TIR: optical design of space telescopes [10698-198]

POSTERS: SMALLSATS

CUBESPEC: low-cost space-based astronomical spectroscopy [10698-205]

VAMOS: a SmallSat mission concept for remote sensing of Venusian seismic activity from orbit [10698-207]

Testing and calibrating an advanced cubesat attitude determination and control system [10698-208]

POSTERS: TECHNOLOGY

Smart starting guesses from machine learning for phase retrieval [10698-210]

Characterization of microdot apodizers for imaging exoplanets with next-generation space telescopes [10698-211]
Using the Spitzer IRAC science archive for instrument trending [10698-213]

Hexapod actuated focal plane for high-resolution suborbital and ground-based exploration [10698-214]

Development of an alignment platform for ESO’s mid-infrared E-ELT imager and spectrograph (METIS) [10698-216]

A new pulse shape description for α particle pulses in a highly-sensitive sub-Kelvin bolometer [10698-218]

Thermal design utilizing radiative cooling for the payload module of LiteBIRD [10698-219]

Modeling non-scalar diffraction in the Princeton starshade testbed [10698-220]

Edge sensor concept for segment stabilization [10698-225]

An active optics system for large UVOIR space telescopes [10698-228]

Raman laser spectrometer optical head: flight model performance verification [10698-229]

TRL-5 EMCCD controller for space applications [10698-230]

Current limitation of the THD2 bench: the scatter issue [10698-232]

Sensitivity analysis for high-contrast imaging with segmented space telescopes [10698-233]

Phase-retrieval-based wavefront metrology for high contrast coronography [10698-235]

NASA’s physics of the cosmos and cosmic origins programs manage strategic astrophysics technology development in preparation for the next decadal survey [10698-236]

Using energy consistency to improve phase retrievals with discrete Fourier transform cropping [10698-237]

The segmented aperture interferometric nulling testbed (SAINT) III: control systems analysis and preliminary results [10698-239]

**POSTERS: WFIRST**

WFIRST coronagraph: digging dark-holes with partially corrected pupil phase [10698-248]
