The 2010-2011 Forest Products Annual Market Review reveals signs of a slower than expected economic recovery, after a global recession and resulting financial crisis that began in 2008. Demand for forest products is starting to increase again, albeit slowly, fuelled largely by strong growth in China, which appears to have weathered the downturn better than North America and Europe. This year, Anastasia Tolmatsova and Miika Malmström undertook market research; prepared price data; produced all the graphics and revised our Graphics Production System, as well as the websites associated with the Review. European and North American output rebounded in 2010 but still lie below pre-crisis production levels.
