TURO PASCAL EXPRESS

ROBERT JOURDAIN

RESUME

“. . . a huge volume of excellent Turbo Pascal Routines with source code. If you
program in Turbo Pascal, you really should have this book.”

Jerry
Pournelle
Byte magazine

At last! This “worth its weight in gold” favorite among Pascal programmers has been
revised for version 4.0 of Turbo Pascal. Substitute these lightning-fast assembly language
routines for time-critical parts of your Turbo Pascal 4.0 programs.
The two diskettes contain more than 250 ready-to-use assembly language subroutines
with source code. A few keystrokes put them to work in your Turbo Pascal programs,
saving endless hours of labor. The book provides extensive documentation for each
routine, including Pascal code examples. Among the contents you’ll find:

- Equipment determination routines and access to expanded memory;
- Extensive keyboard and mouse input functions;
- Routines for bit operations and data compression, plus more than 40 string-
  manipulation procedures;
- Extremely fast video facilities, including text-graphics routines for fancy menus and
  windows;
- Routines for elaborate printer control, formatting, and error recovery;
- Powerful routines for searching directory trees and displaying tree diagrams; and
- Detailed information about writing other assembly routines for assembly language
  programmers.

CONTENTS

A Note to Prior Users of Turbo Pascal Express xi
Introduction xiii
The Hacker’s Quick Reference xvii

1. Using the Subroutine Library
   Introduction 1
   Linking Routines into Your Programs 3
   Automatic Generation of TPU Files 8
   Global Variables 10
   Pointers 12
   The Documentation 12
   The Disk Files 13
   String Parameters 13
   Video Operations 14
   Error Checking 19
   A Final Word 19

2. The System
   Equipment Determination 21
   Determine the DOS Version 21
   Determine the Number of Serial or Parallel Ports Present 22
   Determine if a Game Port is Present 23
   Determine the Number of Floppy- or Fixed-disk Drives 24
   Determine the Kind of Disk Drive 25
   Determine the Amount of RAM Present 26
   Determine the Presence and Quantity of Extended Memory 30
   Determine the Presence and Quantity of Expanded Memory 31
   Determine the Page-frame Address of Expanded Memory 32
   Determine the Number of Unallocated Expanded-Memory Pages 34
   Allocate Expanded-Memory Pages 38
   Move or Exchange Data between RAM and Expanded Memory 40
   Deallocate Expanded-Memory Pages 42
3. **Bit Operations**

- Change a Value's Representation
  - Convert a Numeric Value to a Binary String (51)
  - Convert a Numeric Value to a Hexadecimal String (52)
  - Convert a Binary String to a Numeric Value (55)
  - Return a Bit Field as a Numeric Value (58)
  - Return a Bit Field as a Binary String (60)

- Change Bit Settings
  - Rotate Byte and Word Values (63)
  - Set Bits in a Byte or Word (by bit pattern) (65)
  - Set Bits in a Byte or Word (by value) (67)
  - Set Bits Directly in Memory (by bit pattern) (69)
  - Set Bits Directly in Memory (by value) (71)
  - Copy a Bit Field From One Byte or Word to Another (73)

- Convert a Numeric Value to a Hexadecimal String (54)
- Convert a Binary String to a Numeric Value (56)
- Compress Byte or Word Data (75)
- Decompress Byte or Word Data (77)

4. **String Operations**

- Add Characters
  - Pad the Left or Right End of a String (79)
  - Pad a Position Within a String (81)
  - Pad the Ends of a String, Centering It (83)
  - Make a String Composed of a Single Character (87)
  - Make a String Composed of Repetitions of a Substring (89)

- Delete Characters
  - Delete Characters from the End of a String up to a Boundary (91)
  - Delete Characters to Boundary Characters on Each Side (94)
  - Delete All adjacent Instances of a Specified Character (96)
  - Delete a Specified Character from the End of a String (98)
  - Delete All Instances of a Specified Character (100)
  - Delete All Instances of a Range of Characters (102)

- Change Characters
  - Exchange Two String Variables (104)
  - Overwrite Part of a String with a Substring (105)
  - Replace Part of a String with a Substring (107)
  - Change Every Instance of a Particular Character (111)
  - Change Every Instance of a Range of Characters (112)
  - Change All Alphabetic Characters to Upper- or Lowercase (114)
  - Change Any or All Characters with a Translation Table (116)
  - Expand Tab Characters with Spaces (118)
  - Compress and Decompress Text Strings (120)

- Search Strings
  - Compare Two Strings, Ignoring Case (122)
  - Get Characters from the Right End of a String (124)
  - Return Part of a String up to a Border Character (126)
  - Retrieve Part of a String for Word-wrapping (128)
  - Count the Occurrences of a Particular Character (132)
  - Count the Occurrences of Characters in a Specified Range (133)
  - Count the Number of Words in a String (135)
  - Search for a Character (136)
    - Search for a Character in a Specified Range (138)
    - Search for a Substring from Left or Right (140)
    - Search for a Substring, Ignoring Case (142)

5. **Keyboard and Mouse**

- Intercept Single Keystrokes
  - Clear the Keyboard Buffer (145)
  - Wait for a Keystroke, First Clearing the Buffer (147)
  - Get a Keystroke, with Special Provision for Ambiguous Codes (148)
  - Intercept a Keystroke Without Waiting (151)
  - Get the Next Keystroke in the Buffer Without Removing It (153)
  - Find Out the Scan Code of the Next Keystroke (155)
  - Filter Characters as They are Entered (157)
  - Use Keys as ON-OFF Contact Switches (160)

- Intercept Multiple Keystrokes
  - Input a String and Echo It (163)
  - Input a String, Echoing It from a Right Margin (164)
  - Input a String, Performing Word-wrap Between Two Margins (166)
  - Input a Line and Edit it Using the Cursor Keys (169)
  - Input an Integer Using a Fixed Right Margin (172)
  - Input a Real Value Using a Fixed Decimal Point (175)

- Monitor/Control the Shift and Toggle Keys
  - Test whether a Toggle Key is On or Off (179)
  - Test whether a Toggle or Shift Key is Held Down (180)
  - Turn a Toggle Key On or Off (184)
Use A Mouse

Find Out If a Mouse is Present 186
Reset the Mouse 188
Set the Shape of a Graphics Mouse Cursor 190
Set the Shape of a Text Mouse Cursor 194
Turn the Mouse Cursor On and Off 197
Get the Mouse Cursor Position 198
Get the Status of the Mouse Buttons 199
Set the Mouse Cursor Position 200
Get the Mouse Cursor Position at the Last Button Press 201
Get the Mouse Cursor Position at the Last Button Release 202
Get the Number of Button Presses 203
Set Minimum and Maximum Positions for the Mouse Cursor 204
Find the Distance the Mouse has Moved 205
Set the Ratio of Mouse Motion Per Pixel 206
Define a Screen Region Closed to the Mouse Cursor 207
Define the Threshold for Mouse Acceleration 208

6. Screen Output
Controlling the Video Adaptor
Get and Set the Current Display Page 209
Turn the Blink Attribute On and Off 210
Write Directly to the Video Buffer 212

Controlling the Cursor
Turn the Cursor On and Off 216
Set the Cursor Position on Any Video Page 219
Get and Set the Cursor Shape 221
Make Relative Cursor Moves 224

Set Character Attributes
Set Monochrome Text Attributes 226
Set Color Text Attributes 228
Get and Set the Attribute at a Particular Screen Position 233
Change the Attribute of a Row or Column of Text 235
Change the Attribute of a Screen Area 238

Write Strings
Write Strings on Any Video Page 241
Write a String with Cursor and Attribute Control 245
Write a Specified Portion of a String 247
Write a String from a Specified Memory Position 249
Write a Specified Number of Characters from Memory 250
Write a String and Tab the Cursor 252
Write a String and Clear to the End of the Line 255
Write a String Centered Between Two Columns 257
Right-justify a String 259
Write a String Vertically 261
Word-wrap a Series of Strings 263

7. Text Graphics
Draw Text Graphics
Draw a Box Using Block Characters 267
Draw Lines in Boxes, Filling Intersections 268
Draw Vertical or Horizontal Lines of a Specified Character 271
Draw Vertical or Horizontal Lines of a Specified Character String 274
Fill a Box with a Particular Character 277

Scroll and Page
Scroll All or Part of the Display Vertically 282
Scroll All or Part of the Display Horizontally 285
Clear Noncurrent Pages 287
Add Extra Pages to Any Video Adaptor 289

Windows
Save an Area of the Screen 291
Save an Area of the Screen and then Clear It 295
Restore an Area of the Screen 298
Move an Area Across the Screen, Restoring the Image Beneath 300

8. File Operations
Disk Operations
Read and Change a Disk's Volume Label 307
Turn Read-Write Verification On and Off 309
Read and Write Absolute Disk Sectors 310
Determine that a File or Path Exists 311

Directory Tree Operations
Fill an Array with a Tree Diagram 316
Seek a Subdirectory within the Directory Tree 318
9. Printer Output
   - Printer Operation
     - Test If the Printer is Ready
     - Print with Error Checking and Recovery
     - Print Strings with Embedded Control Codes
     - Make One or More Carriage-Return/Line-Feeds
     - Call the Print Screen (PrtSc) Feature
   - Formatting
     - Repeatedly Print a Specified Character
     - Print Strings, Inserting a Left Margin
     - Print a String and Forward the Printhead
     - Print a String Centered between Two Columns
     - Format a String for Word-wrap
     - Format a String for Right-Justification

10. Writing Your Own Assembly Language Subroutines
    - Setting up a Module
    - Passing Parameters
    - Parameter Types
    - Returning Values from Functions
    - Local Variables and Global Variables
    - The RET Instruction
    - Error Checking
    - Debugging
      - Displaying the Stack
      - Displaying a Variable
      - Displaying the Registers
    - Interfacing the Routines to Other Languages
