So whether it's you, your child, parent, partner or employee who is struggling to hear, you will find all the information you need to overcome the challenges that deafness and hearing loss can bring.

Reviews

Good eBook and helpful one. It really is written in straightforward words and phrases and never confusing. I am just effortlessly could possibly get a enjoyment of looking at a published book.
-- Romaine Rippin

The book is great and fantastic. It absolutely was written very properly and beneficial. It is extremely difficult to leave it before concluding, once you begin to read the book.
-- Lyda Davis II
People with a hearing impairment, hearing loss, or deafness will have either a partial or a total inability to hear sound. Some will rely on lip reading to communicate. Here, we explain the difference between hearing loss and deafness, and the types, causes, and symptoms of both. Hearing impairment, deafness, or hearing loss refers to the total or partial inability to hear sounds. Symptoms may be mild, moderate, severe, or profound. A patient with a mild hearing impairment may have problems understanding speech, especially if there is a lot of noise around, while those with moderate deafness may need a hearing aid. Some people are severely deaf and rely on lip-reading to communicate with others.
